A Visit to Victoria Falls

Have you ever thought about places in the world that you would like to visit? One of the places at the top of many travelers' lists is Victoria Falls. Located on a river in Africa, this waterfall is one of the largest in the world. It was formed about one hundred and fifty million years ago when movement of the earth caused a huge break in the rock under the river.	11
Visitors to Victoria Falls become aware of the waterfall long before they actually reach it. Because the waterfall is about a mile wide, it is visible from forty miles away. In fact, Victoria Falls is sometimes called the world's largest falling curtain of water. From seven miles away, visitors come upon a foggy mist that blankets the area like a thick, dense cloud. The cloud is impossible to miss because it rises as high as a tall skyscraper.	149
The loud roaring noise of the waterfall is also impossible to miss. The noise is caused by huge amounts of water hitting the rock below the falls. With all the mist and noise, it's not surprising that people who live near the waterfall call it "the smoke that thunders."	198
Tourists who visit Victoria Falls have a wide range of activities from which to choose. Most begin with a walking tour of the falls, which comes with a drenching bath in the mist.	231
Tourists who enjoy more active forms of entertainment may choose whitewater rafting or kayaking on the river. Others may decide to take a ride in a hot air balloon right over the falls.	264
Expeditions to photograph elephants, lions, and cheetahs are also very popular.	275
After reading about Victoria Falls, you may have decided to visit the waterfall some day. If you ever make the trip, you will	298
